Education

Institute of Engineering & Management, Salt Lake

Bachelor of Technology in Computer Science – 9.3/10

July 2023 – July 2027

Kolkata, West Bengal, India

Experience

FlyRank AI

July 2026 – Present

Backend Intern

Remote

- Developed and deployed production **RESTful CRUD APIs** using **Node.js** and **Express.js**, achieving an average latency of **4.29ms** for AI applications
- Improved and load-tested CRUD APIs, handling an average throughput of **21,690.91 requests/sec**
- Optimized **API performance** by reducing **99th percentile latency** to **6ms**, enhancing responsiveness for AI-driven features

GSSoC 2026

May 2026 – July 2026

Open Source Contributor

Remote

- Refactored a production **Next.js API** codebase, decomposing a monolithic module into isolated components and eliminating duplicate **CSP headers**, reducing code duplication by **~40%**
- Prepared automated **Vitest** suites across API routes, GitHub API client, and UI components, increasing test coverage by **~35%**
- Collaborated with project maintainers and reviewers across **60+ merged PRs**, incorporating code review feedback and maintaining clean git branch hygiene across parallel workstreams

Projects

Streakforge | *Next.js, TypeScript, GitHub GraphQL API, MongoDB, Vercel* | 🌐

- Architected a **stateless Next.js API** that generates real-time **SVG visualizations** from **GitHub GraphQL** data with strict schema validation via **Zod**, improving user engagement by **~30%**
- Built a fault-tolerant **GitHub GraphQL client** implementing **in-memory TTL Cache**, **AbortController** timeout handling and **Exponential Backoff Retries**, reducing redundant API calls by **~60%** and achieving peak request handling of **22,000 requests/sec**

Taskflow (GDSC 2025) | *Next.js, Google Document AI, NextAuth.js, Firebase, Convex* | 🌐 🌐

- Integrated **Google Document AI** to automate text and data extraction from scanned answer scripts, eliminating manual grading bottlenecks for educators managing **100+ scripts**
- Implemented secure authentication via **NextAuth.js** with Google and GitHub **OAuth**, and engineered real-time data synchronization across grading workflows using **Convex**
- Designed the backend data pipeline across **Firebase** (auth, storage) and **Convex** to persist processed documents and generate grades, feedback, and analytics, improving grading consistency by **~85%**

Coding Profiles

- LeetCode**: Highest rating: 1541 🌐
- Codeforces**: Specialist (Highest rating: 1445) 🌐
- HackerRank** 🌐

Technical Skills

Programming Languages: JavaScript / TypeScript, Java, Python, C / C++, SQL, Go

Backends & APIs: Node.js, Next.js, Express.js, FastAPI, REST APIs, GraphQL APIs, Microservices, Event-Driven Architecture

Frameworks & Libraries: React, Tailwind, Bootstrap, ShadCN, Framer Motion, GSAP

Databases & Tools: MongoDB, MySQL, PostgreSQL, Redis, GitHub, Docker, AWS, Google Cloud Platform

Coursework: DSA, DBMS, OOPS, Operating Systems(OS), Computer Networks(CN)

Achievements

- West Bengal Joint 2023 (WBJEE) Rank – **3243** (1,24,000+ appeared)
- GSSoC 2026 – Peak Rank: **119**; Top **0.28%** Contributors (Ranked among 42,400+ contributors)
- CodeForces Round 1106 (Div 2) – Ranked **342** out of 24,500+ participants
- Leetcode Weekly Contest 513 – Ranked **554** out of 44,000+ participants
